

Work@Home with Microsoft Teams

Do you need to quickly support a new group of remote workers? If your customer uses Microsoft Office 365, you already have a solution.

Microsoft Teams for Collaboration

Microsoft Teams has emerged as the leading platform for enterprise communications and collaboration. Microsoft recently reported that there are more than 44 million daily active Teams users. By April 2020, Teams users generated over 900 million meeting and calling minutes daily.

Teams can be an important tool to help Enterprise CIOs scrambling to support a surge of new, remote workers. Teams offers tight integration with Office 365 applications, tools for workgroup document collaboration, instant messaging, and internal voice/video conferencing.

Remote workers not only need to collaborate within their company but also with customers, vendors and partners. Teams Direct Routing is the solution.

Direct Routing allows enterprises to connect Teams to their company's phone system and service. Remote workers will have access to all of their phone system features and can make and receive calls from the Teams client on their computer or mobile device. With Direct Routing your employees' outbound calls will carry the company's Caller ID information preserving their business identity to the outside world.

Implementing Direct Routing Securely

To implement Teams Direct Routing, Microsoft requires the use of a certified Session Border Controller (SBC). Ribbon's SBC SWe Lite is certified by Microsoft and can be quickly deployed in Azure, the Microsoft Cloud. SBC SWe Lite offers enterprises the perfect blend of performance, user experience, and ease of installation.

SBC SWe Lite has been deployed with many Tier 1 public service providers and Fortune 500 companies. In addition to enabling Direct Routing, SBC SWe Lite will secure your customer's voice infrastructure from bad actors seeking to eavesdrop, undertake Denial of Service (DoS) attacks, or make fraudulent toll calls at the company's expense.

Teams Support for Remote Workers

Microsoft Teams is included in many Office 365 packages. You can help your customers roll out Teams full collaboration functions quickly.

Then, you can help them Connect Teams to the Rest of the World by integrating with their existing phone system and service. Their remote workers will be able to make and receive calls from Teams just like they could from their office.

Work@Home Promotion

In response to the global pandemic and increased demand for Work@Home solutions, Ribbon is offering Ribbon SWe Lite licensing (up to 50 sessions) at no charge until June 30, 2020. This no charge trial license eliminates the barriers many organizations face as they scramble to find budget and get purchase orders processed to communication enable their employees.

We can make it easy for you to help your customers Work@Home, instantly through (partner name)
